Experience

Atlassian **July 2025 – Present**
Software Engineer - Central AI & Data Platform *San Diego, California (remote)*

- Designed and implemented end-to-end data ingestion pipelines for third-party cloud storage connectors (Google Drive), ensuring full file, comment, and activity coverage across millions of entities
- Designed and implemented permission/ACL propagation systems for cloud connectors, minimizing access latency and preventing regression risks
- Designed and productionized OCR and document text-extraction pipelines in Python using Spark and Redshift to generate ML relevance signals powering backend APIs for Rovo AI features
- Built a platform-wide, real-time latency observability system and entity reconciliation pipelines using Kafka, Flink (Java, Kotlin), and Databricks to eliminate multi-cloud mapping drift

Google **December 2024 – July 2025**
Software Engineer - Ads Safety Infrastructure (prev. Gemini Infrastructure, DeepMind) *Los Angeles, California (hybrid)*

- Designed high-throughput C++ image and video classification pipelines leveraging FFmpeg for large-scale bad-ads detection
- Built an AI model regression detection and validation system enabling faster and safer model iteration (SQL, gRPC, Python, Bash)

GoDaddy **April 2022 – December 2024**
Software Development Engineer III - Data Platform Infrastructure *San Francisco, California (remote)*

- Designed and led development of backend data lineage APIs supporting thousands of datasets using Python and DynamoDB; integrated graph visualization in React/Next.js
- Built core data lake capabilities and CI/CD automation using AWS Lake Formation, Glue, DynamoDB, and Python
- Reduced Redshift and Athena costs by 20% and S3 storage costs by up to 55% through automated compression and query optimization workflows (Lambda, EventBridge)

Amazon **July 2021 – March 2022**
Software Development Engineer I *San Diego, California (remote)*

- Led migration of legacy payments services from C++ to Java using shadow traffic, A/B testing, and metrics validation to ensure zero customer impact
- Built backend APIs for chargeback document processing with comprehensive unit and integration test coverage
- Improved system reliability via AWS monitoring, alarms, and chaos testing

Canto Software **May 2019 – August 2019**
Software Market Analyst Intern *San Francisco, California*

- Scraped, analyzed, and visualized digital asset management (DAM) market data using Python
- Identified competitive trends and product positioning insights influencing roadmap strategy

Projects

Research @ Cornell McMahon Lab (Quantum Computing) **Aug. 2019 – Dec. 2019**

- Developed neural network models for simulated coherent Ising machines
- Built PyTorch classifiers to evaluate quantum optimization behavior

Education

Cornell University **Aug. 2018 – May 2021**
Computer Science, B.A. (Completed in 3 Years), 3.6 GPA *Ithaca, New York*

Technical Skills

Languages: Python, Kotlin, Java, C++, JavaScript, SQL, Bash, OCaml, C, ARM Assembly, HTML/CSS
Frameworks/Platforms: AWS (Lambda, S3, DynamoDB, Glue, Lake Formation, Athena, Redshift), Kubernetes, Docker, Kafka, Flink, Spark, Databricks, React, Next.js, gRPC, Apache Airflow, GraphQL, Helm
Tools: GitHub Actions, Kibana, Alation, ServiceNow, Insomnia, Google Analytics
